ABSTRACT:

A pressure sensitive, double sided self adhesive tape (I) consists of a support that is coated both sides with a pressure sensitive adhesive composition comprising: (A) up to 50 wt.%, preferably 30-40 wt.% of a crosslinked, non-foamed polyurethane, formed from a hydroxy functionalised polybutadiene, polyesterdiol, polyestertriol, polyesterpolyol, polyetherdiol, polyethertriol or polyetherpolyol, polyetherdiamine, polyethertriamine, polyetherpolyamine as well as a mono-alcohol, mono-amine, polyether-mono-ol, polyether-mono-amine or products of the last hour named compound types and a diisocyanate or chemically derived isocyanate; (B) 50-70 wt.% filler and (C) optionally other processing aids. Also claimed is a process for the production of (I) by application of dried and crosslinked adhesive composition followed by application of a non-hardened, paste or liquid polyurethane composition by means of two component mixing technology onto the adhesive composition; coating of the polyurethane composition with a separator paper coated with a dried and crosslinked adhesive composition and hardening or crosslinking of the polyurethane composition at 20-120 degrees C.

ABSTRACTED-PUB-NO: EP 894841A

BASIC-ABSTRACT:

A pressure sensitive, double sided self adhesive tape (I) consists of a support that is coated both sides with a pressure sensitive adhesive composition comprising: (A) up to 50 wt.%, preferably 30-40 wt.% of a crosslinked, non-foamed polyurethane, formed from a hydroxy functionalised polybutadiene, polyesterdiol, polyestertriol, polyesterpolyol, polyetherdiol, polyethertriol or polyetherpolyol, polyetherdiamine, polyethertriamine, polyetherpolyamine as well as a mono-alcohol, mono-amine, polyether-mono-ol, polyether-mono-amine or products of the last hour named compound types and a diisocyanate or chemically derived isocyanate; (B) 50-70 wt.% filler and (C) optionally other processing aids.

Also claimed is a process for the production of (I) by application of dried and crosslinked adhesive composition followed by application of a non-hardened, paste or liquid polyurethane composition by means of two component mixing technology onto the adhesive composition; coating of the polyurethane composition with a separator paper coated with a dried and crosslinked adhesive composition and hardening or crosslinking of the polyurethane composition at 20-120 deg. C.

USE - The pressure sensitive, double sided self adhesive tape (I) is useful for sealing, preferably for the closure of cracks (claimed).

ADVANTAGE - The tape (I) has a non-foamed support and is less susceptible to absorption of moisture or solvents. The tape has good flexibility, high peeling

strength and high stability to temperature and weathering.
